Profile Sanding Wheel 3009

This universally usable profile sanding wheel is suitable to all kinds of wood, as well as to MDF with a high durability.

In order to use it in a table-made milling cutter with a higher number of revolutions, we are offering a **D = 150mm** variation, as well.

Different kinds of granuations are available.

Profile Sanding Wheel 3010

This is a further development of our proven Profile Sanding Wheel 3009, which is especially made for the grinding of coarse-grained softwood.

In order to use it in a table-made milling cutter with a higher number of revolutions, we are offering a **D = 150mm** variation, as well.

Different kinds of granuations are available.

NEW

Profile Sanding Wheel 3033

With this special sanding wheel, you have a superior solution for the paint structure processing of MDF profiles.

It is used twice:

1. To smooth the coated MDF surface
2. To subsequently sand the PUR-FILLERS

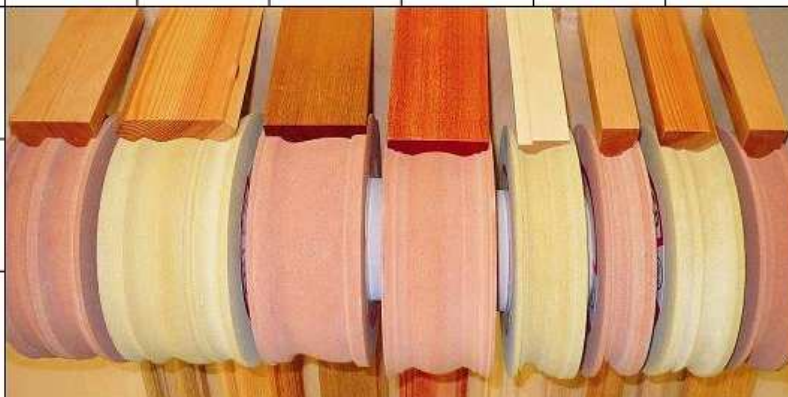

Sanding Wheel F 17

Sanding wheel for paint finish and intermediate paint finish, consisting of soft fleece.

How does the profile get into the sanding wheel ?

1. Take a three foot piece of hardwood of the profile to be sanded. Using a table saw cut notches 4 - 6mm wide and at intervals of 15 - 20mm along the length of the molding.
2. Press the profile directly at the saw cut forcefully against the rotating wheel. Continue this procedure until the negativ of the profile has been ground completely into the wheel.
3. For sanders and sanding units proceed accordingly: The wheel is lowered into the profile cut by turning the hand-wheel above the sanding unit. With sanders be sure to adjust for smooth passage of the workpiece beforehand. Please don't forget to use flanges.

Our company has always manufactured innovative products of high quality. Due to over 40 years of experience in research, development and production of sanding material, we are now able to fulfill our individual customers needs. This method has made us a worldwide supplier in the most different spheres of activity regarding the technique of sanding wood.

We would appreciate your interest in our products - please contact us for further information.

Advantages of our Profile Sanding Wheels:

- ◆ various possibilities to process on different machines
- ◆ individual profiles are easy to create by oneself
- ◆ the sanding wheel remains always as sharp as it has been originally, the dust from sanding will not clog the pores
- ◆ exact sanding without burn marks
- ◆ high profitability through a high rate of feed and through a long durability
